#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 27 April 2006.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Niimi et al. (JP2000-256062; Applicant submitted) in view of Kawamoto (JP2002-043103; Applicant submitted).

Niimi teaches a multilayer PTC thermistor comprising:

a plurality of stacked ceramic layers including a barium titanate [0015] with a plurality of internal electrodes including nickel [0019]. Niimi further teaches a Y (number of donor atoms/number of Ti atoms) in the range of  $0.001 \leq \text{Sm/Ti} \leq 0.5$ . Niimi teaches the claimed invention except for the thickness of the ceramic layer between the internal electrodes.

Kawamoto teaches a barium titanate PTC thermistor having nickel internal electrode [0015], where the ceramic layer thickness is less than 20 micrometers apart [0017]. Kawamoto teaches that this thickness prevents "nickel diffusion" and "high resistance" of the ceramic layer. It would have been obvious to one of ordinary skill in the art at the time of the invention to employ the ceramic thickness of less than 20 micrometers in order to obtain the above advantages. Further, since the ceramic thickness is less than 20, one skilled in the art would have easily met the claimed conditions.
